

Adapting to flood risk under climate change —a review of good policy and practice

A seminar by Professor Rob Wilby
VCCCAR Visiting Fellow

4pm Thursday 1 September 2011
Lecture Theatre Royal Society of Victoria
1-9 Victoria Street Melbourne

Rob Wilby is Professor of Hydroclimatic Modelling at Loughborough University in the United Kingdom and a leading researcher on climate variability and change in relation to the management of freshwater environments. With experience drawn from industry, government, consultancy and academia there is very much an applied emphasis to his work.

This seminar introduces some of his research findings relating to the challenges facing Australian policy makers in management of flood risk in a variable climate, with particular emphasis on recent flood events in Victoria and Queensland. His conclusions are based on a detailed understanding of climate science, scientific modeling and an appreciation of the information needs of high level decision makers.

No RSVP necessary.
